

The main objective of Metrirep Kft.:

To continue to serve a growing number of satisfied and returning partners with our traditionally high quality, reliable products delivered on time and on demand. We believe it is important to develop mutually beneficial relationships with our partners. We aim to fully understand and meet our customers' needs and expectations. In addition to this, we give priority to the distribution of products that help us to achieve environmental sustainability and a long life cycle.

Our motto:

"to recommend the best solution for the customer and to implement it with sustainability in mind"

This means that we aim to achieve customer satisfaction by recommending and implementing technically adequate, cost-effective solutions. We aim to stay in the market and increase our market share by continuously improving the quality of our products and services, introducing new products and offering competitive prices.

In the course of our activities, we take into account the globally emerging requirements related to climate change. This includes considering the ecological footprint generated by our own operations, as well as integrating the climate-related expectations and requirements expressed by our clients into our activities. For processes that may have an impact on climate change, we apply environmentally conscious standards, raise awareness of the importance of keeping recoverable raw materials in circulation, and promote efficient work organization that can contribute to reducing the ecological footprint of any given organization. This awareness-raising effort extends not only to our employees but also to our subcontractors, through the establishment of internal regulations and the transfer of organizational knowledge.

Quality work and protection of our environment is a fundamental requirement at Metrirep Kft., where we see our employees as the source of achieving the goals we have set. The management of the company is committed to implementing an integrated policy, to continuously monitoring our environmental performance, to defining measures based on the risks and opportunities assessed, and to preventing pollution. To ensure the effective and controlled operation of our integrated management system, we constantly monitor and develop the quality awareness and environmental awareness of our employees, and do our utmost to improve their skills and our commitment to quality and the environment through training and information.

In the interests of our customers, we only co-operate with subcontractors and suppliers who contribute to the traditionally recognised "Metrirep quality" through their reliable, fast, accurate and consistent work and who comply with the environmental requirements of Metrirep Kft.

Our integrated policy applies consistently and comprehensively to all our activities and operations. Quality and the protection of our environment must be part of our daily work processes. Metrirep Kft. aims to achieve and document its objectives and activities in compliance with the legal and statutory requirements and in accordance with the ISO 9001 and ISO 14001 standards.

Budapest, 7 October 2025
